

# Naturally Lashed

PLEASE READ INSTRUCTIONS COMPLETELY PRIOR TO USE

For the maximum growth of your natural eyelashes, the Lash4i Solution 0.03% should be applied daily for 12-16 weeks or until desired result is achieved. Your bottle of Lash4i comes with a factory-sealed tip and a loosely screwed top containing a small point. To break the seal, screw the top on tightly to puncture the factory seal tip allowing the serum to be dispensed.

The following are detailed instructions for applying Lash4i:

1. Wash hands and face thoroughly to remove all creams, lotions, and/or makeup products. Also, remove contact lenses.
2. Squeeze one drop of the solution into the bottle cap and dip the eyeliner brush into the bottle top to coat with solution. (Step 1 below)
3. Apply solution to the base of the top eyelid spreading it from the inner eye to the outer eye. Apply as close to the upper lash line as possible. (Step 2 below) **DO NOT USE ON LOWER LASHES.**
4. Do not let the liquid enter the eye. Quickly wipe away excess liquid with a tissue or a q-tip.
5. Wash the brush thoroughly and keep it in a clean and dry holder. Replace the bottle cap immediately to maintain hygiene and store in a cool and dry place.
6. Do not use Lash4i more than 1x/day. Lash4i enhances the natural growth process. Applying it more will not speed up or increase growth. You will only waste the solution.
7. Once desired length is achieved, administer a maintenance dose at least 3x a week. If you discontinue the maintenance dose, your eyelashes will revert back to their original state.
8. Lash4i can also be used on eyebrows. One drop is sufficient for both the upper eye lashes and also both eyebrows.

**Lash4i is not medication. Individual results may vary**

**RELEASE OF LIABILITY**-By using this product you agree to hold harmless *Naturally Lashed Inc.* from and against any and all claims, charges, demands, damages, losses, expenses, and liabilities incurred, directly or indirectly, as a result of using any product purchased.
