

Naturally Lashed

PLEASE READ INSTRUCTIONS COMPLETELY PRIOR TO USE

For the maximum growth of your natural eyelashes, the Careprost Solution 0.03% should be applied daily for 12-16 weeks or until desired result is achieved. Your bottle of Careprost comes factory-sealed for your protection. A sharp twist of the top will break the seal allowing the serum to be dispensed.

The following are detailed instructions for applying Careprost:

1. Wash hands and face thoroughly to remove all creams, lotions, and/or makeup products. Also, remove contact lenses.
2. Squeeze one drop of the solution into the bottle cap and dip the eyeliner brush into the bottle top to coat with the solution. (Step 1 below)
3. Apply solution to the base of the top eyelid spreading it from the inner eye to the outer eye. Apply as close to the upper lash line as possible. (Step 2 below) **DO NOT USE ON LOWER LASHES.**
4. Do not let the liquid enter the eye. Quickly wipe away any excess liquid with tissue or a q-tip.
5. Wash the brush thoroughly and keep it in a clean and dry holder. Replace the bottle cap immediately to maintain hygiene and store in a cool and dry place.
6. Do not use Careprost more than 1x/day. Careprost enhances the natural growth process. Applying it more will not speed up or increase growth. You will only waste the solution.
7. Once desired length is achieved, administer a maintenance dose at least 3x a week. If you discontinue the maintenance dose, your eyelashes will revert back to their original state.
8. Careprost can also be used on eyebrows. One drop is sufficient for both the upper eye lashes and also both eyebrows.

Careprost is not medication. Individual results may vary
